

Palmeco RealStone

The natural stone building board

Palmeco® RealStone

The natural stone building board

Look and feel of real stone

Palmeco RealStone combines actual stone with the versatility of a Palmeco building board. A layer of natural and constituted stone finish added to a Palmeco Master Board provides a natural aesthetic quality and structure that is easy and flexible to meet your design requirements.

Why use RealStone?

Using actual stone for structures is challenging because it's heavy and hard to customise. However, a RealStone finish is easier and more cost-effective without compromising on quality and beauty.

Bring home the benefits

RealStone uses thinly-sliced stone that is expertly bonded to the versatile Master Board, making it flexible and light to carry. These advantages means on-site cutting is possible too. Embrace the aesthetic of natural stone with the practicality of modern architecture.

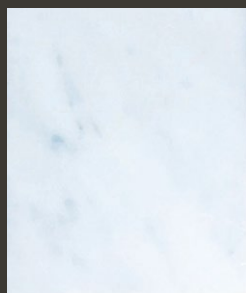

Benefits

- ✓ Lighter than stone
- ✓ Highly durable
- ✓ Easier handling
